

# The natural choice for specialist services

## Protection is always evolving

### Close protection

First Security provides cost-effective close protection services in the UK to our private clients:

- Close protection officers fully trained to SIA standards and vetted to BS 7858
- Advance drivers to chauffeur our clients
- Individual close protection officers, right up to a full executive protection team.

### Penetration testing

Penetration testing involves breaking into an organisation to expose weaknesses in security. From that we can work out how to prevent future intrusions. Our testing includes:

- A fully documented test plan so we can agree an acceptable level of intrusion with you
- Agreed rules of engagement
- Immediate notification if the test results expose any critical security flaws
- Full executive summary report of all our findings, once the test is complete

### Community Safety Accreditation Scheme (CSAS)

This scheme allows a Chief Constable to accredit staff with powers to deal with anti-social behaviour, such as litter, abandoned cars and graffiti.

CSAS has proven the benefits of working with local forces to reduce low level, anti-social behaviour. In our experience, working with shopping centres, footfall has shown a significant increase as members of the public feel more secure with visible presence of a CSAS accredited officer, petty crime is down and individuals who may be considering anti-social activities tend to stay away.

We already have CSAS accredited offices on our business, and have significant experience in supporting clients and their teams in becoming accredited.
